**Fig. 1a** Five reef fish taxa cleaning separate *Mola* body-regions, **b** heavy ectoparasite-loads on *Mola*, **c** *P. imperator* cleaning *Mola* fin trailing edge. Scale bars 50 mm

to *Holacanthus*, it may be an aberrant behaviour in the ‘Lembongan angelfishes’—a product of predictable, albeit transient aggregations of megafauna carrying sufficient ectoparasite loads to warrant such behavioural divergence.

**Acknowledgements** We thank www.scubali.com. J. R. Smith optimised HD video images from a Sony HDWF900/R3 camera.
